

# DAY 6 - DEPLOYMENT PREPARATION AND STAGING ENVIRONMENT SETUP – foodtuck.com

## Table of Contents

Day 5 Recap: .....	3
Day 6 - Deployment Preparation and Staging Environment Setup .....	3
Objective: .....	3
Key Learning Outcomes: .....	3
Professional Environment Types: .....	4
Key Areas of Focus: .....	4
1. Deployment Strategy Planning .....	4
2. Environment Variable Configuration .....	4
3. Staging Environment Setup .....	5
4. Staging Environment Testing .....	5
5. Documentation Updates .....	5
Steps for Implementation: .....	
Step 1: Hosting Platform Setup .....	5
Step 2: Configure Environment Variables .....	5
Step 3: Deploy to Staging .....	6
Step 4: Staging Environment Testing .....	6
Step 5: Documentation Updates .....	7

## Day 6: My Project Work

Today, I completed several tasks and projects based on my teacher's instructions. Below is a summary of my work:

### 1. Understanding TypeScript Concepts:

- Reviewed key concepts related to TypeScript, including type annotations, interfaces, and object structures.
- Practiced writing TypeScript code to reinforce learning.
- 2. **Implementing Objects in TypeScript:**
  - Created and manipulated objects using TypeScript.
  - Worked with nested objects and type aliases to structure data efficiently.
  - Applied structural typing principles in various scenarios.
- 3. **Working with Arrays and Tuples:**
  - Learned how to declare and use arrays in TypeScript.
  - Implemented tuples and understood their differences from arrays.
  - Practiced accessing and modifying tuple elements.
- 4. **Function Implementation and Overloading:**
  - Wrote functions using TypeScript's strong typing.
  - Implemented function overloading to handle multiple argument types.
  - Worked with optional and default parameters in functions.
- 5. **Exploring Asynchronous Programming:**
  - Understood the difference between synchronous and asynchronous execution.
  - Practiced writing asynchronous functions using `async` and `await`.
  - Explored the usage of promises and error handling.
- 6. **Practical Coding Assignments:**
  - Developed small projects using TypeScript, HTML, and CSS.
  - Debugged and optimized code to ensure efficiency.
  - Implemented best coding practices as instructed by my teacher.

By completing these tasks, I have gained a deeper understanding of TypeScript and its application in real-world projects. I am confident in my ability to apply these concepts in future projects.
