

Food Menu Browsing

Explore the inner workings of our food ordering system. We'll break down the key processes for developers and engineers. From browsing the menu to placing an order, understand the data flow and architecture.

Seamless User Registration Process

H

Form Submission

User fills out the registration form on the frontend.

Data Validation

Backend validates data and checks for existing accounts.

Token Creation

Authentication API creates a new user and assigns a unique ID.

Efficient Food Order

Checkout

User adds meals to the cart and proceeds to checkout.

Order Validation

Order details are sent to the backend for validation.

Payment Processing

Payment details are processed securely through a payment gateway.

Restaurant Processing

Restaurants receive order details and begin meal preparation.

Delivery

Order is packed and sent for delivery via our food delivery partner.
